

" Provision of environmentally less burdensome printing services"

joint public procurement

Summary of the technical part of the public procurement documentation relating to the award of the contract

The subject of the public procurement procedure is the provision of printing services in the following manner:

- Leasing of a larger number of multifunction devices and printers, including the appropriate software (readers for device login and management or print control), and
- Maintenance of the leased multifunction devices and printers, including printing materials (excluding printing paper).

The services of this public procurement will be provided for 60 months (5 years), with the planned lease start date being January 1, 2026. In addition, during the two-month period before the services begin, the selected tenderer must install the multifunction devices and printers with software, including readers for management and print control, considering that the contract with the current provider ends on December 19, 2025, and continuity of service on existing devices at all locations must be ensured.

The selected tenderer must install all devices and ensure their operation at all contracting authority's locations during the period from November 1, 2025, to December 31, 2025 (or in a two (2)-month period from the contract signing date if the contract is signed later than November 1, 2025). The tenderer must first replace the existing devices, completing the replacement within the first 45 days of the two-month transitional period.

The installation of all devices includes the installation and configuration of software on the devices and the server. The installation of the devices (within the two-month period and also later in the case of model replacements, rotation, or device substitution) will be carried out by the selected tenderer in agreement with the contracting authority and the current service provider, ensuring that the contracting authority's workflow is not disrupted (weekends, public holidays, afternoons – outside of working hours) and that the disconnection and removal of the old device and the connection of the new device occur simultaneously.

The public procurement is carried out for multiple contracting authorities according to the rules of occasional joint public procurement. The individual contracting authorities of this joint public procurement are:

1. Holding Slovenske elektrarne d.o.o. (HSE) for its own needs and, within the framework of the integrated IT business process, also for the needs of the companies Dravske elektrarne Maribor d.o.o. (DEM), Soške elektrarne Nova Gorica d.o.o. (SENG), and RGP d.o.o. Velenje (RGP).
2. HSE Invest d.o.o. (HSE Invest),
3. ECE d.o.o. (ECE),
4. Energija Plus (E+), and
5. Termoelektrarna Šoštanj d.o.o. (TEŠ).

The subject of this joint public procurement is not divided in lots.

****NUMBER AND LOCATION OF DEVICES****

For the purposes of preparing the tender and calculating the estimated total tender value, the contracting authority estimated the number of devices. The estimated number of devices is not the basis for actual billing.

The actual billing will be carried out based on the actual devices delivered or installed.
